

Aura Salon Appointment Booking App – UI/UX Case Study

Project Overview

Aura Salon Appointment Booking App is a mobile-first UI/UX design project created to simplify salon appointment scheduling. The app allows users to browse services, select a stylist, choose a date and time slot, and confirm appointments through an intuitive booking flow.

Problem Statement

Many salons still rely on phone calls, messaging apps, and manual registers. This can cause missed bookings, scheduling conflicts, and poor customer experiences. The goal was to design a simple and efficient mobile booking solution.

Business Chosen

Aura Salon – a beauty and grooming salon offering hair styling, hair coloring, makeup, nail art, facial treatments, and threading services.

Target Users

Busy professionals, students, regular salon customers, and first-time visitors seeking a quick and convenient booking experience.

Project Goals

Reduce booking friction, improve appointment management, create a professional interface, and provide a smooth mobile experience.

User Flow

Sign Up → Salon Information → Services → Date & Time Selection → Stylist Selection → Appointment Confirmation → Book Another Appointment.

Screens Designed

Sign Up Screen, Introduction Screen, Services Screen, Appointment Screen, Stylist Selection Screen, and Confirmation Screen.

Design Decisions

A soft pink color palette was selected to match the salon theme. Circular image layouts improve visual appeal while maintaining consistency.

UX Considerations

Mobile-first design, simple navigation, clear call-to-action buttons, readable typography, and an intuitive booking process.

Outcome

The final solution provides a complete salon appointment booking experience that is easy to use and suitable for real-world business adoption.

Tools Used

Figma and GitHub.

Conclusion

This project demonstrates practical UI/UX skills including user research thinking, user flow creation, mobile interface design, and appointment booking experience design.
